

Utility system design/build

Utility system design, fabrication and construction require a unique combination of engineering know-how and in-the-field expertise. At Bassett, we've been successfully combining these winning factors for over 65 years to produce outstanding projects for our clients. Trust your next utility system project to the company that has proven its ability to get the job done right ... the first time!

Serving all your utility needs:

- Boiler and steam systems
- Sewer and waste-water systems
- Compressed air systems
- Potable and non-potable water systems
- Natural gas installation, certification and repair
- Industrial gas systems

Associated critical systems and services we provide

- Energy and efficiency analysis and engineering
- Industrial ventilation system design, fabrication and installation
- Plumbing system design, fabrication and installation
- HVAC system engineering, fabrication and installation
- Maintenance and emergency service for all systems
- Process cooling and heating systems
- System testing and balancing
- Process piping
